

| Github Issue Link | Description |
|---|---|
| https://github.com/matplotlib/matplotlib/issues/7523 | When the text instances have the same parameters (coordinates, text string, alpha) except for the linespacing, the second one is displayed over the first one. The linespacing of the first instance is used for the second instance as well. |
| https://github.com/matplotlib/matplotlib/issues/1656 | If you create an animation and do not store it in a persistent variable, it will fail. |
| https://github.com/matplotlib/matplotlib/issues/8089 | When plotting time sequenced data, using matplotlib.dates.MinuteLocator(interval=1) to set the x-axis ticks results in a Runtime Error. |
| https://github.com/matplotlib/matplotlib/issues/7840 | The fill_between color / facecolor / edgcolor resolution are not deterministic. Hatches in the fill_between function are not rendered with the Agg backend. |
| https://github.com/matplotlib/matplotlib/issues/8059 | When adding a BboxConnectorPatch, the edges are displayed correctly but the facecolor is not shown. The face is empty. |
| https://github.com/matplotlib/matplotlib/issues/8128 | The autofmt_xdate of the figure.Figure class by default only formats the major tick labels. Increased functionality including the minor ticks as well would be nice. |
| https://github.com/matplotlib/matplotlib/issues/6921 | Having numpoints less than 1 isn't handled as it isn't supposed to allow numpoints less than 1. |
| https://github.com/matplotlib/matplotlib/issues/6284 | Create a figure and axis, and add a vspan to that axis. If you twinx it, and apply a plot to the twin, the x_limits can adjust, potentially making the vspan not visible. |
